Backlog Prioritization
Facilitation

EXPERIENCE

Boeing

Product Designer | June 2017 - Present

Lead design on several products for manufacturing and information technology by working with Stakeholders, Product Managers, and Developers in Agile Product Teams. Provide thought leadership by spearheading research, collecting feedback, running experiments, designing interfaces, and incorporating Lean UX and User-Centered Design, while also developing and teaching design related courses.

- Collaborate across functional disciplines through pairing, design critiques, and design studio exercises to generate a variety of solutions.
- Establish style guides for modern frameworks to expedite design asset generation consistent with end-user expectations.
- Present the user interface through pixel perfect high-fidelity mockups so that objectives are easy to discover, perform and relay.
- Market and promote products and their features so that users understand what is being delivered and its value.
- Advocate for the value of design being integral to successful software development.

Developer | July 2016 - June 2017

Developed applications on an IBM Platform for Business Process Management. Focused on delivering features that provided value to end-users through rapid prototyping and testing, while balancing business requirements for internal processes. Applied understanding of SQL Server database infrastructure and modeling to optimize application performance.

Database Administrator | February 2015 - July 2016

Designed, developed, and maintained operational and process metrics for senior managers by delivering a Minimal Viable Product (MVP). Directed effort for evaluating service delivery opportunities by analyzing past, present, and future offerings. Coached and mentored peers in the SQL Server community to encourage knowledge transfer and breakdown of silos.

Georgia Tech

Junior Systems Administrator | December 2012 - 2014

Developed automated tasks using Powershell for administering 300 devices for 120 employees. Focused on driving process improvements within desktop services to improve customer satisfaction through interviews and quick feedback loops.

AGCO

IT Project Manager, Intern | May 2013 - August 2013

Conducted definition of business requirements for handling the solution design with external vendors. Presented project plan during regular gate reviews to communicate progression on eliminating unnecessary software licenses; resulting in \$85k in savings.
